EXPERIENCE

State Farm

Lead Software Engineer | November 2024 - Present
Software Engineer II | October 2022 - November 2024

Lead frontend development for customer-facing life insurance applications covering policy servicing and digital claims across 10 policy types. Roughly 128,000 user actions per month.

- Led the consolidation of policy-servicing projects into a shared repository, designing a modular frontend structure and engineering conventions for adding and maintaining customer transaction flows.
- Built a shared React component library used across the team's flows to standardize layout and accessibility. Presented the approach to department leadership.
- Modernized customer-facing life insurance applications with Vite and React 19, including a TypeScript and corporate design-system migration for policy servicing.
- Mentor six engineers through design and code reviews; interviewed 10+ candidates and onboarded four.
- Helped plan AI adoption across Engineering and Technology, including coding agents and MCP servers. Co-developed project guidance and reusable agent skills, and trained engineers to apply them and establish development guardrails.

Microsoft

Engineer I, Detection and Abuse Analysis | November 2019 - October 2022

- Analyzed false positives, missed detections, and emerging abuse patterns. Shared findings with architects to help refine detection algorithms.
- Built the team's onboarding program, trained every new hire, and led team reviews of difficult cases.

WattTime

Software Engineer, Senior Capstone Project | September 2019 - June 2020

- Built Python scrapers to collect emissions data into a shared SQL database, and a React dashboard for exploring trends by time and geography.

SELECTED PROJECT

finledger | Source | Demo

Built a Python pipeline and JavaScript dashboard that turn broker CSV exports into a portfolio view, calculate cost basis, track tax lots, and reconcile results against broker tax statements. Runs locally, with nine broker parsers and over a thousand tests.

SKILLS

Frontend: TypeScript, JavaScript, React, Redux, HTML, CSS, Vite, Vitest, Testing Library
Backend and data: Java, Spring, Python, Node.js, REST APIs, SQL
Delivery: Docker, AWS, Kubernetes, CI/CD, Git
Engineering: Frontend architecture, API design, accessibility, automated testing, mentoring

EDUCATION

Bellevue College | B.S. Computer Science, 2020
Evergreen State College | B.A. Philosophy, 2014
