EXPERIENCE

State Farm

Lead Software Engineer | November 2024 - Present

Software Engineer II | October 2022 - November 2024

- Own frontend architecture for two customer-facing applications supporting 10 life insurance policy types. Together, they handled approximately 128,000 user actions in August 2026.
- Consolidated transaction flows from two repositories into a shared structure that grew from four flows to nine. Designed API contracts with backend engineers, including endpoints that combine data from multiple services.
- Migrated both applications from Create React App to Vite and from React 18 to 19. In the 30-day windows before and after the Vite release, p75 page load fell about 40% while traffic roughly doubled.
- Led the TypeScript and corporate design-system migration for the policy-servicing application, released in August 2026.
- Rebuilt the beneficiary change flow through five design iterations informed by user research, adding support for estates, trusts, and organizations.
- Set coding and review standards, built automated quality checks, and led accessibility fixes based on company audits.
- Mentor six engineers through design and code reviews. Interviewed at least ten candidates and onboarded four engineers.

Microsoft

Engineer I, Detection and Abuse Analysis | November 2019 - October 2022

- Analyzed false positives, missed detections, and emerging abuse patterns. Shared findings with architects to help refine detection algorithms.
- Built the team's onboarding program, trained every new hire, and led team reviews of difficult cases.

WattTime

Software Engineer, Senior Capstone Project | September 2019 - June 2020

- Built Python scrapers to collect emissions data into a shared SQL database, and a React dashboard for exploring trends by time and geography.

SELECTED PROJECT

finledger | [Source](#) | [Demo](#)

Built a Python pipeline and JavaScript dashboard that turn broker CSV exports into a portfolio view, calculate cost basis, track tax lots, and reconcile results against broker tax statements. Runs locally, with nine broker parsers and over a thousand tests.

SKILLS

Frontend: TypeScript, JavaScript, React, Redux, HTML, CSS, Vite, Vitest, Testing Library

Backend and data: Java, Spring, Python, Node.js, REST APIs, SQL

Delivery: Docker, AWS, Kubernetes, CI/CD, Git

Engineering: Frontend architecture, API design, accessibility, automated testing, mentoring

EDUCATION

Bellevue College | B.S. Computer Science, 2020

Evergreen State College | B.A. Philosophy, 2014
